# 8-inch Color Video Monitors

PVM-8044Q/8041Q/8040

## The PVM 8-inch Series Monitors

The Sony 8-inch range of monitors has been specifically introduced to meet the need for portable monitors which offer stable performance and excellent features. The long experience of Sony in the development of image display devices is behind the design of this range of monitors, the PVM 8-inch series, ensuring their outstanding reliability and superb picture quality. Low in weight, compact and rugged, these monitors are ideally suited for field operation but are equally at home when rack mounted in a fixed installation.

Although these monitors use a common chassis design and the same basic circuit technologies, they vary in features and performance to match varying requirements. The PVM-8044Q is a picture evaluation monitor designed especially for use in field production. The HR (High Resolution) Trinitron CRT fitted to this monitor provides an excellent center resolution of 450 TV lines for superb picture reproduction. The PVM-8041Q is suitable as a functional monitor for multi-purpose application. Both the PVM-8044Q and PVM-8041Q are equipped with a component (Y/R-Y/B-Y or RGB) input facility and can be operated on AC and DC power supplies for ENG/EFP applications. These monitors can also accept both 4:3 and 16:9 aspect ratio signals. For those who require a basic monitoring device, the PVM-8040 is available with both composite video and Y/C inputs.

Whether the requirement is picture evaluation or basic picture viewing, the PVM 8-inch series provides the superb picture quality with the facilities that you need.

PVM-8044Q  
Ideal for picture evaluation in studio, ENG/EFP applications

PVM-8041Q  
For multi-purpose use in various applications

PVM-8040  
For basic monitoring device

## HIGH QUALITY PICTURE

### • High resolution

The PVM-8044Q incorporates a HR (High Resolution) Trinitron CRT which provides a high horizontal resolution of 450TV lines.

### • Stable color reproduction

Black level stability is a very significant parameter in professional monitoring because of its importance in providing stable, accurate color reproduction. To achieve this stability, the PVM 8-inch series employs a beam current feedback circuit which stabilizes the CRT drive by checking the cathode current at low light signal levels. This effectively corrects the black level drift, giving stable color reproduction over a long period of time and compensating for changes in CRT characteristics.

### • Comb filter for NTSC\*

Both PVM-8044Q/8041Q employ a comb filter for improved luminance/chrominance separation. This reduces cross color interference and contributes to a higher resolution.

## VARIOUS INPUT FACILITIES

### • Component (Y/R-Y/B-Y or RGB) input\*

For maximum convenience and versatility, both the PVM-8044Q and PVM-8041Q have component (Y/R-Y/B-Y or RGB) inputs. This enables direct connection with equipment such as a Camera Control Unit (CCU) and a Betacam SP VTR. This ensures that a high quality picture is monitored for picture evaluation. Y/R-Y/B-Y or RGB input is selected via the input selection switch.

### • Y/C Inputs

Y/C input is standard in the PVM 8-inch series so that luminance/chrominance video signals can be input to the monitor. This minimizes cross color/dot interferences and realizes high quality video pictures.

### • External sync/Sync on Green\*

The PVM-8044Q/8041Q have external sync inputs so that they can be synchronized with other equipment fed with the same sync signal. These monitors can also accept sync on Green signals.

## CONVENIENT OPERATIONAL FEATURES

### • 4:3/16:9 operation capability\*

The PVM-8044Q/8041Q picture aspect ratio can be selected

Switch operation	Underscan switch on the front panel	Underscan switch off	Underscan switch off
4:3/16:9 switch	<input checked="" type="checkbox"/>	<input type="checkbox"/>	4:3 normal scan
4:3/16:9 switch	<input type="checkbox"/>	<input checked="" type="checkbox"/>	16:9 normal scan

### • Underscan/Normal scan switch\*

In the Underscan mode, the picture size is reduced and the entire active picture is displayed on the monitor. This facility allows picture edges to be observed.

### • H/V delay\*

With the H/V delay mode, both the horizontal and the vertical blanking areas can be displayed simultaneously for inspection of horizontal and vertical syncs.

### • Blue only mode\*

The Blue only mode monochrome display allows easy VTR noise inspection and chroma/phase adjustment.

### • Wired remote control capability\*

Mode selection for Blue only, H/V delay, Underscan and External sync together with input selection can be operated from a custom-made selector when connected to the remote input with the supplied Mini Din 8-pin connector. Tally on/off can also be controlled.

### • AC/DC operation\*

As well as operating from an AC power source, the PVM-8044Q/8041Q can also be DC powered for field operation. The monitors can be operated from one or two NP-1B battery packs or a BP-90A battery pack with a DC-210 battery adaptor. When the battery becomes weak, the power LED starts blinking as a warning indication of low battery voltage.

*The monitors are not equipped with battery chargers. To charge batteries, an appropriate battery charger for each battery type should be used.*

Front Panel

PVM-8044Q/8041Q

PVM-8040

#### • Bias/Gain control\*

Bias and Gain control volumes are accessible on the front panel of the PVM-8044Q/8041Q. Fine adjustment of white balance can be easily done from the front of the monitor while observing the screen.

## OTHER FEATURES

#### • EIA standard rack mountable

Two PVM 8-inch series can be mounted side by side into an EIA standard rack with the optional MB-507 rack mounting bracket. If only a single monitor is fitted, the empty space can be covered with an optional MB-509 blank panel.

#### • Audio monitoring facility

A speaker (0.5W, monaural) is built into the monitor for sound monitoring.

#### • High durability

The PVM 8-inch series are of heavy duty construction to cope with operation under adverse conditions. In addition, the metal cabinet minimizes electromagnetic interference between adjacent

monitors. Guard bars are fitted to the PVM-8044Q/8041Q as protection for the front panel controls. Whatever the application and situation, the PVM 8-inch series can always be relied on to provide a stable picture display.

#### • Worldwide TV standard\*

The PVM-8044Q/8041Q are fully compatible with the three major TV standards, NTSC, PAL and SECAM. NTSC<sub>4.43</sub> can be reproduced as well.

#### • Carrying handle

The PVM 8-inch series can be easily carried on location with the carrying handle.

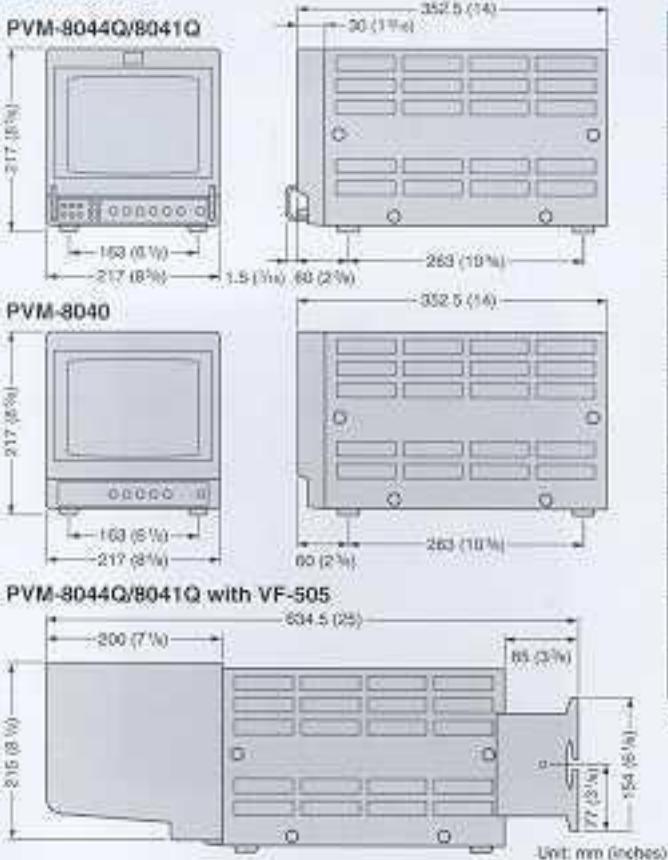

#### • Monitor ENG kit\*

The optional VF-505 ENG kit contains a monitor hood and cord reel for the PVM-8044Q/8041Q monitors for operational convenience in the field.

\*Applicable for PVM-8044Q/8041Q only.
